

Parvo virus

 sanskritias.com/pt-cards/parvo-virus-31

- 'Parvo virus' is a highly contagious viral disease. **It affects the intestines of dogs**, which can be fatal.
- Dogs suffering from this disease mainly show symptoms such as bloody diarrhea, vomiting, dehydration and lethargy. The **mortality rate due to its infection is about 90%**.
- It is spread through contact with infected dogs, their excreta and infected objects. People caring for infected dogs can also be carriers of this virus.
- **There is currently no cure for this disease**, but the ability to fight the virus can be developed in dogs by vaccinating them at an early age.
- In recent times its effect has been seen in Uttarakhand, Maharashtra, Uttar Pradesh etc. It is noteworthy that the **B19 type of parvo virus affects only humans. It is also called 'fifth disease'**.
