

Xylophaga Nandani

sanskritiias.com/pt-cards/xylophaga-nandani-11

- A team of researchers has discovered a **new species of mollusc, Xylophaga Nandani, in the eastern Arabian Sea**. It belongs to the Xylophagidae family.
- **This rare species of mollusc is found in the deep sea**. The size of these organisms is very small. They live on the wood lying in the sea.
- **With the help of their shell, they cut the wood into fine particles and consume these particles as food.**
- This discovery is important because it is the first time that a member of the genus Xylophaga has been discovered in the Arabian Sea.
